Coffee Shop Sprint 1 - Charanpreet Chall Feedback

Done Well:
- Great job listening in lecture and using "/" to link to the home page.
- Great job on the folder structure!
- Great application of semantic HTML tags throughout your site.
- Great job understanding & applying box model properties to your site.
- Great job removing the default margins set on elements by the browser to make your HTML layout match the mockup more closely.
- Great grasp of BEM naming! Keep this up with future projects.
- Really great use of comments in your code, it's nicely organized and clean.
- Awesome job recreating the mockup! Your site matches it almost perfectly.

To Improve:
- Ensure that your in page navigation menu links to the proper sections on the menu page (hot drinks, cold drinks, pastries). Review using the "id" property to jump to specific sections of a page.
- Navigation on the index page does not correctly link to the menu page. Remember that since it's inside a folder, you need to use ../pages/menu. For "About" in the home page, use / instead of ../.
- For items where you're using 0%, you can replace them with 0.
- Remember that just because the style guide makes mention of max/min values for width/height, doesn't necessarily mean that you need to specifically use these values within your code. You just need to respect them and make sure your styling that you apply doesn't interfere (which you did a great job of).
- As per standard, try adding an additional line in between class elements in css files.
- Very small note - at the bottom of the menu page, there should not be a margin/white space.
